

TELEMATICS: A support strategy for Grade 10, 11 & 12 learners in the WCED

Interactive Telematics Teaching is a 21st century response to learner/teacher support.

The principle purpose for this intervention is to create a virtual learning environment to support teaching and learning to Grade 12 learners. Lessons are beamed simultaneously to 145 schools across a diverse geographical from the studio at the University of Stellenbosch.

The uniqueness of this programme is that it creates a platform for dialogue and interaction with the presenters as well as others. This virtual classroom platform makes it possible to reach a large number of learners and provide them with quality individual tutoring. Learners at any one of the 145 selected schools, are able to, via interactive internet facilities, "interrupt" the presenter to ask questions or request a detailed explanation of the educational material, when necessary.
