

BRICKLAYING AND PLASTERING SG

NOVEMBER 2006

It is very difficult to write a representative report when only TWO candidates from one centre wrote the examination.

Question 1 was the only question in which both candidates obtain more than 50 %, but there is still room for improvement.

Question 2 was answered poorly. Although the question was clearly formulated the candidates did not supply the relevant answers.

Question 3, 5 and 7 were answered poorly. This is a clear indication of the lack of basic understanding of basic building concepts. Educator will have to spend more time explaining the concepts and working through examples.

Question 4 and 6 were not answered at all. Educator will have to spend more time explaining the concepts and working through examples.

Question 8 was answered poorly. This is a clear indication of the lack of basic mathematical skills.

Educator will have to spend more time explaining the concepts and working through examples.
