

Question 1

This question was answered fairly well compared to previous years. Most candidates drew something that resembled the required answer.

Question 2

The isometric drawing was not answered as well as expected. Several candidates had no idea about how to draw lines that were not on the horizontal or vertical plane (angled lines). Many candidates still cannot construct a circle in isometric.

Question 3

The two-point perspective drawing was answered very well. Few candidates had problems with this question.

Question 4

This remains the worst-answered question in the exam. Almost 40% of candidates had no idea of how to draw a simple drawing in third angle orthographic projection, and drew the drawing in first angle projection. Also, candidates did not read the question carefully. Many drew a right view, when a left view was required.

Question 5

The majority of candidates did not know how to project a true shape of the section. Several candidates did not know to hatch two different materials in opposite directions.
