

NOTE:

- If a candidate answers a question TWICE, only mark the FIRST attempt.
- Consistent accuracy applies in all aspects of the marking memorandum.

LET WEL:

- Indien 'n kandidaat 'n vraag TWEE keer beantwoord, merk slegs die EERSTE poging.
- Volgehoue akkuraatheid is DEURGAANS op ALLE aspekte van die memorandum van toepassing.

QUESTION/VRAAG 1

1.1.1	$(x - 2)(4 + x) = 0$ $x = 2$ or $x = -4$	$\checkmark x = 2$ $\checkmark x = -4$ (2)
1.1.2	$3x^2 - 2x - 14 = 0$ $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$ $x = \frac{2 \pm \sqrt{(-2)^2 - 4(3)(-14)}}{2(3)}$ $= \frac{2 \pm \sqrt{172}}{6}$ $x = 2,52$ or/of $x = -1,85$ OR/OF $x^2 - \frac{2}{3}x + \frac{1}{9} = \frac{14}{3} + \frac{1}{9}$ $\left(x - \frac{1}{3}\right)^2 = \frac{43}{9}$ $x - \frac{1}{3} = \pm \frac{\sqrt{43}}{3}$ $\therefore x = \frac{1 \pm \sqrt{43}}{3}$ $x = 2,52$ or/of $x = -1,85$	\checkmark standard form/ <i>standaardvorm</i> \checkmark substitution into correct formula/ <i>substitusie in korrekte formule</i> $\checkmark\checkmark$ answers/ <i>antwoorde</i> (4) \checkmark for adding $\frac{1}{9}$ on both sides/ <i>tel $\frac{1}{9}$ by aan beide kante</i> $\checkmark x = \frac{1 \pm \sqrt{43}}{3}$ $\checkmark\checkmark$ answers (4)

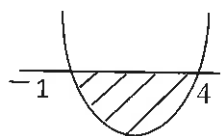

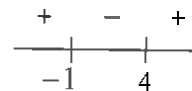

Handwritten signatures and initials, including 'PP', 'MHA', and a large scribble.

<p>1.1.3</p>	$2^{x+2} + 2^x = 20$ $2^x(2^2 + 1) = 20$ $2^x = \frac{20}{5}$ $2^x = 2^2$ $\therefore x = 2$ <p>OR/OF</p> $2^x \cdot 2^2 + 2^x = 2^2 \cdot 5$ $2^x(2^2 + 1) = 2^2 \cdot 5$ $2^x \cdot 5 = 2^2 \cdot 5$ $\therefore x = 2$ <p>OR/OF</p> $4 \cdot 2^x + 2^x = 20$ $5 \cdot 2^x = 20$ $2^x = 4 = 2^2$ $\therefore x = 2$	<p>✓ common factor/<i>gemeen. faktor</i> ✓ simplification/<i>vereenvoudiging</i> ✓ answer/<i>antwoord</i> (3)</p> <p>✓ common factor/<i>gemeen. faktor</i> ✓ simplification/<i>vereenvoudiging</i> ✓ answer/<i>antwoord</i> (3)</p> <p>✓ $5 \cdot 2^x = 20$ ✓ $2^x = 4$ ✓ answer/<i>antwoord</i> (3)</p>

QUESTION/VRAAG 11

11.1.1	$P(\text{male/manlik}) = \frac{83}{180}$ or 0,46 or 46,11%	✓ answer/antwoord (1)
11.1.2	$P(\text{not game park/nie wildreservaat})$ $= 1 - P(\text{game park/wildreservaat})$ $= 1 - \frac{62}{180}$ $= \frac{59}{90}$ or 0,66 or 65,56% OR/OF $P(\text{not game park/nie wildreservaat})$ $= \frac{98}{180} + \frac{20}{180}$ $= \frac{118}{180}$ $= \frac{59}{90}$ or 0,66 or 65,56%	✓ $1 - \frac{62}{180}$ ✓ answer/antwoord (2) ✓ $\frac{98}{180} + \frac{20}{180}$ ✓ answer/antwoord (2)

11.2 Events are independent if /Gebeure is onafhanklike indien

$$P(\text{male}) \times P(\text{home}) = P(\text{male and home})$$

$$P(\text{manlik}) \times P(\text{huis}) = P(\text{manlik en huis})$$

$$P(\text{male/manlik}) = \frac{83}{180}$$

$$\text{and/en } P(\text{home/huis}) = \frac{20}{180} \text{ or } 0,11 \text{ or } 11,11\%$$

$$P(\text{male/manlik}) \times P(\text{home/huis})$$

$$= \frac{83}{180} \times \frac{20}{180}$$

$$= \frac{83}{1620}$$

$$= 0,05123 \text{ or } 5,12\%$$

$$P(\text{male and home/manlik en huis})$$

$$= \frac{13}{180}$$

$$= 0,07222... \text{ or } 7,22\%$$

Therefore $P(\text{male}) \times P(\text{home}) \neq P(\text{male and home})$

Dus $P(\text{manlik}) \times P(\text{huis}) \neq P(\text{manlik en huis})$

Thus the events are not independent. /Dus is die gebeure nie onafhanklik nie

OR/OF

	Home/Huis	Not Home/ Nie huis	
M	13	70	83
F	7	90	97
	20	160	180

$$P(\text{female/vroulik}) \times P(\text{not home/nie huis})$$

$$= \frac{97}{180} \times \frac{160}{180}$$

$$= \frac{194}{405}$$

$$= 0,479012345... \text{ or } 47,90\%$$

$$P(\text{female and not home/vroulik en nie-huis})$$

$$= \frac{90}{180}$$

$$= 0,5 \text{ or } 50\%$$

Therefore $P(\text{female}) \times P(\text{not home}) \neq P(\text{female and not home})$

Thus the events are not independent.

Dus $P(\text{vroulik}) \times P(\text{nie-huis}) \neq P(\text{vroulik en nie-huis})$

Dus is die gebeure nie onafhanklik nie.

PUBLIC EXAMINATIONS

ANNEXURE A : MATHEMATICS PAPER 1 NOVEMBER 2014

MEMORANDUM NOTES TO MARKERS

- **Continued Accuracy – when the second mistake is made: stop marking; 1st one is regarded as a slip; the second one is regarded as they do not know what they are doing – stop marking**
- **Incorrect formula: 0 marks**

QUESTION 1

Question 1.1.2

- **Only** place where there will be a penalty for rounding
- If the substitution is not shown but everything else is correct – max 3 / 4 marks
- This is the place where we penalise the candidate for not **SHOWING** how they get to the answer.

Question 1.1.3

- Trial and error – try 1, didn't work; try 2, it works $\therefore x = 2$. 2/3 marks
- Breakdown: $2^{x+2} + 2^x = 2^2 + 2^4$
 $x + 2 + x = 2 + 4$
 $x = 2$ This is a breakdown 0/3 marks
- Mathematics behind getting to $x = 2$ **MUST** be correct
- Answer only: 2/3 marks

Question 1.2

- If the candidate says $x = -\frac{3}{2}$ or $x = -1$
 $y = -\frac{9}{4}$ or $y = -2$

This then carries a maximum of 4/6 marks

- If the candidate does not show the factorisation but gets to the answer of y correct, then there is **NO** penalty.
- If the square is **NOT** put in in the substitution line, then the quadratic becomes the same – only lose substitution mark \therefore 5/6 marks
- If the candidate simplifies the problem to a linear equation, the only mark they can get is for the substitution (including the squared) \therefore max 1/6 mark

Question 1.3

- If they leave the answer as a correct sketch with the critical values on it: 3 / 4 marks
- If the candidate does $(x + 1)(x - 4) < 0$ then gets the answer $x < -1$ or $x < 4$: 2 / 4 marks
- If the candidate does a graphical solution but concludes incorrectly: 3 / 4 marks

- If the candidate leaves the answer as (including the open circles) or shades on the x -axis on the parabola 4 / 4 marks

- If the candidate changes the question to an equality, max 2 / 4 marks (✓ standard form ✓ factorisation)

- The critical value mark is awarded in the context of solving an inequality (i.e. in conjunction with the graphical solution or the table solution)

Question 1.4

- Answer only: 2 / 2 marks
- If $k < -4$ then 1 / 2 marks
- If they don't get the first mark except in the instance above i.e. if the candidate answers $k = -4$: 0 / 2 marks

QUESTION 2**Question 2.2**

- The mark for a and d is given independent of the formula.
- Incorrect formula but $a = 2$ and $d = 7$ is listed: 1 / 3 marks
- Incorrect formula: 0 / 3 marks
- Answer only: 3 / 3 marks

Question 2.3

- If $\sum_{n=1}^{251} = 7n - 5$ then 1 / 2 marks
- If $\sum_{n=1}^{251} T_n$ or $\sum_{n=1}^{251}$ (wrong formula) then 1 / 2 marks

Question 2.4

T_n is a continued accuracy mark from 2.3

Question 2.5

- Answer only: 1 / 4 marks
- If $\frac{251}{4} = 62,75 = 63$ then 1 / 4 marks
- If $\frac{252}{4} = 63$ only then 1 / 4 marks

**QUESTION 3****Question 3.1**

Answer only: 2 / 2 marks

Question 3.1.2

- If the candidate does the solution using regression analysis: $a = 7$; $b = -9$; $c = 1$ and $T_n = n^2 - 9n + 7$, 4 / 4 marks
- If the answer is correct, then 4 / 4 marks
- If answer only: EVERYTHING must be correct to get 4 / 4 marks otherwise 0 / 4 marks

Question 3.1.3

If the candidate starts with $n = 52$ and gets $T_{52} = 2243$ and $T_{53} = 2339$: full marks

Question 3.2.1

- Scientific notation is correct and will be awarded full marks: $3,81 \times 10^{-6}$
- If the candidate leaves the answer as $\frac{1}{262144}$: 2 / 3 marks

Question 3.2.2

- Answer only: 2 / 2 marks
- If answer is given as 21:1 / 2 marks

Question 3.3

Be aware of alternatives here.

QUESTION 4**Question 4.1**

If the candidate writes down the function as $g(x) = \frac{2}{x+1} + 1$ then p and q values are implied and award

2 / 2 marks

Question 4.2

- Answer only: 2 / 2 marks
- If the candidate has $\frac{2}{x-1} + 1 = 0$ then $x = -1$ then 1 / 2 marks

Question 4.3

- Note that the answer can be done independently of Question 4.1
- Note that the answer can be done as a CA to the answer in Question 4.1: i.e. $x = -p - 5$ for the CA mark.

Question 4.4

- CA from 4.1 If candidate has $\frac{2}{x-1} + 1 = x$ then OS = 3,41
- If the candidate starts with S $(\sqrt{3}; \sqrt{3})$ with no working and gets $OS^2 = 6$: 3 / 5 marks
- If the candidate assumes any other value for the point S, no CA marks

QUESTION 5**Question 5.1**

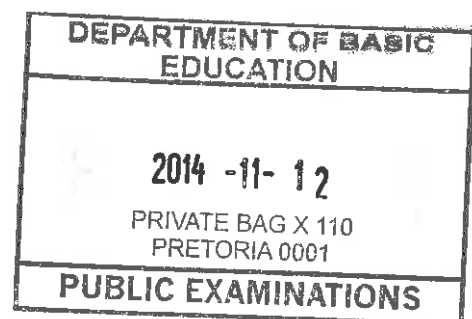

If $\log_3 \frac{1}{3} = \log_3 3^{-1} = -\log_3 3 = -1$: 0 / 2 marks

Question 5.2

- Answer only: 2 / 2 marks
- If the candidate states: $y = a^x$ then 2 / 2 marks

Question 5.3

Answers can be written in terms of a .

[Handwritten signatures and initials]

Question 5.5

- Answer only: 3 / 3 marks
- The candidate can use the log inequality.
- If the candidate gives the answer in terms of a then 3 / 3 marks i.e. $x \geq \frac{1}{a^3}$
- If the candidate leaves the answer as $x \leq \frac{1}{27}$: 2 / 3 marks

QUESTION 6

Question 6.1

- No penalty for rounding.
- Penalise for leaving in surd form as the question states to TWO decimal places.
- Penalise 1 if the candidate does not make a choice for x .
- The $y = 0$ can be implied.

Question 6.2

Both marks are accuracy marks.

Question 6.3.1

- If the candidates swap the functions around then max 2 / 3 marks.
- If the candidate leaves the answer as $QT = 2\sqrt{x} - (4x^2 - 6)$ then 3 / 3 marks.
- If the candidate uses the distance formula with $(x; 2\sqrt{x})$ and $(x; 4x^2 - 6)$ and $QT = \sqrt{(2\sqrt{x} - 4x^2 + 6)^2 + (x - x)^2} = 2\sqrt{x} - 4x^2 + 6$ then 3 / 3 marks
- If the candidate uses the distance formula with $(x; 2\sqrt{x})$ and $(x; 4x^2 - 6)$ and $QT = \sqrt{(4x^2 - 6 - 2\sqrt{x})^2 + (x - x)^2} = 4x^2 - 6 - 2\sqrt{x}$ then 2 / 3 marks
- If the candidate provides the solution:

$QKT = QK + KT$	✓ $QKT = QK + KT$
$QK = 2\sqrt{x}$	
$KT = -(4x^2 - 6)$	✓ $-(4x^2 - 6)$
$QKT = 2\sqrt{x} + (-4x^2 + 6)$	✓ answer

Question 6.3.2

- CA must apply for the derivative from Question 6.3.1.
- If a candidate simplifies the equation by using their incorrect values then the CA cannot be applied.
- Be careful of the kinds of answers that the learner gives. The x value MUST be positive due to the position of K on the graph. If x is negative, then there is a breakdown.

QUESTION 7

Question 7.1

- If the candidate swaps A and P, the answer will be $i = -14,87\%$: max 1 / 3 marks
- If the candidate rounds off early and gets $i = 13\%$: max 2 / 3 marks
- If the candidate uses the incorrect formula: 0 / 3 marks
- If the candidate leaves the answer as 12,9%: 2 / 3 marks
- If the candidate leaves the answer to more than 2 decimal places then no penalty

Question 7.2.1

- The marks for n and i are independent of the formula.
- Early rounding: max 3 / 4 marks

Question 7.2.2

- If the candidate uses the F_v formula: 1 / 4 marks for $x = 6000$.
- Accept $n = 180,07$
- Do not accept $n = 180$ 3./4 marks

Question 7.2.3

- If the candidate answers Samuel only: 1 / 2 marks
- The totals can also be calculated:
 - Melissa’s total will be $6000 \times 180,07 = R\ 1\ 080\ 420$
 - Samuel’s total will be $5505,43 \times 240 = R\ 1\ 321\ 303,20$

QUESTION 8

There is a maximum penalty of 1 for incorrect notation in the WHOLE of question 8.

Question 8.1

- Mistakes in notation: max 4 / 5 marks
- Do not penalise if the candidate does not have the bracket in the second to last step.
- If the candidate uses rules of differentiation: 0 / 5 marks
- If the candidate simplifies the problem and does first principles on $3x^2$: 0 / 5 marks
- Markers need to be careful of the correct answer by incorrect methods.
- Ignore the substitution of $h = 0$.

Question 8.2

If the candidate leaves the -3 in the answer, then max 1 / 2 marks

Question 8.3

- The mark for the derivative is a CA mark
- The candidate can use the chain rule to solve this problem.

$$\begin{aligned} \frac{dy}{dx} &= 2(x^6 - 1) \cdot 6x^5 \\ &= 12x^5(x^6 - 1) \quad \checkmark 2(x^6 - 1) \quad \checkmark 6x^5 \quad \checkmark 12x^5 \\ &= 12x^5 \sqrt{y} \end{aligned}$$

- The candidate can square root first and then use implicit differentiation. An AP candidate may use this method.

$$\begin{aligned} y &= (x^6 - 1)^2 \\ y^{\frac{1}{2}} &= x^6 - 1 \\ \frac{1}{2} y^{-\frac{1}{2}} \cdot \frac{dy}{dx} &= 6x^5 \quad \checkmark \frac{1}{2} y^{-\frac{1}{2}} \quad \checkmark \frac{dy}{dx} \quad \checkmark 6x^5 \\ \frac{dy}{dx} &= 12x^5 \sqrt{y} \end{aligned}$$

Handwritten signatures and initials, including 'PP' and several illegible signatures.

Question 8.4

- If the candidate works out $x = \frac{1}{3}$ and conclude $x > \frac{1}{3}$: full marks
- If the candidate stops at $x = \frac{1}{3}$ then 2 / 4 marks
- The mark for $f''(x) > 0$ can also be awarded for a “sketch” graph of f .

QUESTION 9**Question 9.1**

= 0 must be stated and not implied.

If the candidate gets $x = 3$ by factorising the quadratic factor and concludes $x = 3$ and $y = 0$: 1 / 6 mark

Question 9.2

If the candidate draws a cubic graph passing through (0 ; 18) then the candidate can get 1 mark.

Question 9.3

If the candidate's answer is $-\frac{1}{3} < x < 3$: 0 / 3 marks

**QUESTION 10****Question 10.2**

- If the candidate only writes $V = lbh$: 1 / 3 marks
- If the candidate only gets to $b = 50 - h$: 2 / 3 marks

Question 10.3

- = 0 can be implied.
- 5th mark is for rejection of one of the h 's.
- If derivative incorrect:
CA but the answer must make sense. Be careful that $0 < h < 20$.
Do not CA if the candidate gets a quadratic that can be factorised. This has simplified the solution

QUESTION 11**Question 11.2**

If the candidate just states not independent with no calculations: 0 / 4 marks

QUESTION 12**Question 12.1.1**

There is NO CA for not knowing the number of letters in the alphabet. The candidate gets no marks if they do not start with 26 ...

Question 12.1.2

The CA only continues if the number they start with is 2 less than the number they started with in 12.1.1

Question 12.2.2

- If the candidate only gives the answer as 3!: 1 / 3 marks
- If the candidate only gives the answer as 5!: 1 / 3 marks
- If the candidate only gives the answer as $3! \cdot 4! = 144$: 1 / 3 marks
